Aditya Pokkunuri

Agentic AI Solutions Architect

+91-7207180691 | adityapokkunuri@gmail.com | linkedin.com/in/adityapokkunuri | GitHub

Claude Certified Architect – Professional | **Claude Certified Developer – Foundations** | Anthropic

Professional Summary

Agentic AI Solutions Architect with hands-on experience designing production-grade RAG pipelines, dual-LLM orchestration, and multi-agent systems for healthcare, recruitment, and enterprise HRMS & field-force platforms. Anthropic-certified as Claude Certified Architect (Professional) and Claude Certified Developer (Foundations). Combines strong engineering fundamentals with applied expertise in prompt engineering, model routing, geospatial systems, and responsible AI deployment to ship systems that cut operational overhead and improve decision velocity.

Skills

- **Languages:** Python, Java, C++, JavaScript, TypeScript, SQL
- **AI & Agentic Frameworks:** Claude (Anthropic), Agentic AI Architecture, Prompt & Context Engineering, Multi-Agent Systems, Model Routing, RAG, n8n, LLMs (OpenAI), SLMs (Meta-Llama 3 8B), Modal Gateway, ChromaDB
- **Application & Infra:** React.js, Node.js, FastAPI, Supabase (RLS, Realtime), PWA, Leaflet / Google Maps APIs, Docker, PostgreSQL, Celery/Redis, Vector Databases, RESTful APIs, Git
- **Core:** Data Structures, Algorithms

Experience

OTTOBON Professional Services July 2025 – Present
Agentic AI Engineer *Visakhapatnam, India*

- Architect and deliver agentic AI systems across HR operations, field-force management, healthcare communication, and recruitment, combining RAG pipelines, dual-LLM routing, and multi-agent orchestration.
- Designed a dual-LLM routing architecture — **Meta-Llama 3 (8B)** for low-latency local governance paired with **OpenAI GPT-4o** for complex reasoning — balancing cost, latency, and accuracy in production.
- Built full-stack HR modules (task management, payroll automation, real-time messaging) and a RAG-powered WhatsApp healthcare chatbot with semantic search over the WhatsApp Business API.
- Architected a configurable, multi-tenant Enterprise HRMS & Field Force Management platform with geofenced attendance, GPS-verified field visits, and live operations tracking, deployable across industries.
- Architected an AI-native job platform automating nightly ingestion from **20+ sources**, AI-driven job enrichment, hybrid résumé-to-job matching, and AI mock interview evaluation.
- Engineered AI Vision-based quality control and behavioral performance analytics, scaling platforms to **30+ employees**, a **25+ student cohort**, and thousands of automatically processed job postings.

Projects

Enterprise HRMS & Field Force Management Platform | *React 19, TypeScript, Supabase, Leaflet, PWA*

- Architected a mobile-first, **multi-tenant PWA** combining **7 core HR modules** and a **5-component field-force sub-system** in one platform, deployed for **3+ client organizations** and **200+ users** across multi-branch businesses with on-site and field teams.
- Built **geofenced selfie attendance**: each punch-in is checked against office coordinates and a configurable radius (meters) using distance calculation plus a live front-camera selfie; out-of-boundary punches are auto-flagged for manager review, with break tracking and missed-punch logging.
- Developed a field visit planner (Mon–Sat weekly itineraries, manager-assigned mandatory targets) and **GPS-geotagged visit logging** capturing coordinates, photo proof, notes, and audio summaries, making **100% of submitted visit reports location-verified**.
- Built a **multi-level review pipeline** where visit reports enter a pending queue and managers inspect GPS stamps to approve or flag them with follow-up instructions.
- Delivered a **live field operations map** (Leaflet) with GPS pings at configurable intervals, travel-path breadcrumbs, speed, and visit milestones for real-time regional visibility.
- Enforced a **5-tier RBAC hierarchy** (enterprise → region → branch → team → self) through Supabase Row-Level Security, with approval chains derived automatically from each employee's reporting line.

- Shipped the HR core: a leave engine across **4 leave types** with monthly quota enforcement and 1-tap approvals, a Kanban board with **4 status stages** and **4 priority levels**, bulk Excel import, payroll with PDF payslips and salary advances, a drag-and-drop org chart, and WebSocket chat.
- Designed a **4-step client onboarding workflow** (scripted schema & security-policy provisioning, environment config, geofence setup, bulk staff import), bringing new-client deployment down to **under 1 day**.

Talent Ops – AI-Native HR & Operations Intelligence | *React, Node.js, Supabase, Llama 3 8B, OpenAI* talent.ottobon.clo
- Built an AI-native operations platform for **30+ employees** and a **25+ student cohort**, consolidating tasks, payroll, messaging, and performance tracking that were previously spread across spreadsheets and chat groups.
- Developed a task management engine that has tracked **thousands of tasks** since deployment and enforces planning discipline by requiring daily plans before work is executed.
- Architected a **dual-LLM chatbot**: Meta-Llama 3 (8B) runs locally for routine process and policy queries, and OpenAI handles complex reasoning; routing **∼70% of queries** to the local model cut API costs.
- Engineered an automated **'Gatekeeper'** that uses AI Vision to check submitted work proofs before a task can close, rejecting incomplete or low-quality submissions automatically.
- Built a **behavioral performance engine** scoring punctuality, task completion, and plan adherence, giving leadership weekly performance dashboards.
- Automated payroll by computing salaries directly from attendance and task data, and added real-time messaging for team coordination.

Sakhi – WhatsApp AI Healthcare Companion | *n8n, RAG, WhatsApp Business API* janmasethu.com/sakhi
- Built a RAG-powered healthcare chatbot on n8n workflows with semantic search over the WhatsApp Business API, serving **1,000+ patients** and answering **5,000+ medical queries** with instant, context-aware responses.

Ottobon Jobs Platform | *FastAPI, React + Vite, Supabase, Celery/Redis, GPT-4o* jobs.ottobon.in
- Built a nightly ingestion pipeline across **20+ scraper adapters** (job boards, ATS platforms, consulting firms) with distributed locking and SHA-256 deduplication, processing thousands of job postings.
- Designed a hybrid résumé-to-job matching engine (embedding similarity + skill overlap + AI experience scoring) with skills-gap reports, an AI career coach, and a mock interview engine.

Achievements & Certifications

- **Claude Certified Architect – Professional (Anthropic)**: Partner Program credential for architecting and leading enterprise-scale Claude deployments, integrations, and responsible AI governance.
- **Claude Certified Developer – Foundations (Anthropic)**: Credential for building applications with Claude, covering the API, prompt engineering, and tool use.
- **University Hackathon Champion:** Won 2 of 3 university-wide hackathons; Top 35 rank among 190+ competing teams.
- **Machine Learning Certification:** Introduction to Machine Learning, Duke University.

Education

GITAM University Visakhapatnam
Bachelor of Technology in Computer Science *Oct 2021 – Apr 2025*
